

Probability - HCMUS - April 25th, 2025
Semester 2 : Year 2024 - 2025 - Time Duration: 60 minutes

Remarks:

- Standard distribution table (Gaussian table) is located on the second page of the test.
- Every calculations must be rounded to 4 decimal places; do not write results under fractional form

Question 1. (3.0 points). During a football match, there are 3 footballers labeled A, B and C reserving. The probabilities of respective substitution to be made are respectively 40%, 35%, 25%. For each footballers, the probabilities of scoring goals in the next 15 minutes are accordingly 15%, 10% and 8%.

- (a) Find the probability of one of them scores goals in the next 15 minutes.
- (b) Given that one of the footballers scored goals in the next 15 minutes, of which highest rate is belonged to?
- (c) Given that there is not any goals being scored in 15 minutes after substitution, what is the probability of the footballer "C" entering the lawn?

Question 2. The life expectancy of a light bulb (in hours) is random variable $Y = 100 \times X$, where X is the random variable consisting of PDF (probability density function) is given by:

$$f(x) = \begin{cases} \frac{C}{x^4}, & \text{if } x \geq 1 \\ 0, & \text{otherwise} \end{cases}$$

where C is an unknown constant

- (a) Find the constant C .
- (b) Calculate $E(Y)$, $Var(Y)$.
- (c) Consider two following events:
 - A: Life expectancy of light bulb is atleast 100 hours.
 - B: Life expectancy of light bulb is not more than 200 hours.

Are these events independent? How come?

Question 3. (4.0 points) The weight of a food packet for cattle has a normal distribution with a mean of 1.5kg and standard deviation of 250g. A farm buys 500 packets for its own cattle.

- (a) Calculate the probability of a packet weighing more than 2kg.
- (b) Every week, the cattle needs to be fed about 175kg food proportion. Estimate the probability that the farm still has atleast 55kg left in the end of month. Assuming a month comprises 4 weeks, and the food proportion at each week is equally likely.
- (c) Before in use, the farmer firstly measures the food packet so as to ensure the sufficient amount for cattle. If its weight is less than 1kg, the farmer will have to exchange with the appropriate one. Estimate the probability of farmer request of minimum 10 food packets.

END

Standard Distribution Table $Z \approx N(0, 1) : \Theta(z) = \mathbb{P}(Z \leq z) = \frac{1}{\sqrt{2\pi}} \int_{-\infty}^z e^{-\frac{x^2}{2}} dx$
